DID YOU KNOW?

What does HSTC means?

Since 1992 with the ST1100 aka "Pan European" model, Honda equips more and more its motorcycles with a system called Honda Selectable Torque Control (HSTC). This system monitors constantly the speeds of the front and rear wheels via speed sensors incorporated into the Anti-Lock Braking System (ABS). When the rear wheel begins to rotate significantly faster than the front, the systems reduces fuel delivery to the engine and limits rear-wheel slippage. In 2019 with the new CBR650R, Honda applied this technology for the first time to its mid-displacement SuperSport motorcycle. The rider can deactivate it on demand.
